

# Coordinate Grid

You might recognize  
this from Algebra?

For our applications  
you need to  
remember that the  
position of the “x”  
and “y” axis

The Plasma Cam uses the same coordinates to locate objects on the cutting table.

So when we draw in Plasma Cam, we can place things using the (X,Y) system.

The **X** number will place us horizontally and the **Y** will place us Vertically

Plasma Cam Grid

48" x 48"

Spacing Set to 1" x 1"

# Label the four corners of the grid on your notes.

# Label the four corners of the grid on your notes.

Help

Let's Take a look at the  
Program, Here is the Tool Bar.

For today we will need only the  
“Draw” tab.

File Edit View Draw Machine Help

Line(s) L

Rectangle G

Circle Q

Arc A

Bulge U

---

Fillet F

Chamfer

*Array...*

---

Text...

These are the Draw Commands that we will work with! Please take note of all the shortcut commands. Write them on your note page!

# To Draw a Line:

The bottom left corner of the screen will be where you will see the coordinates that you enter.

First point of line:

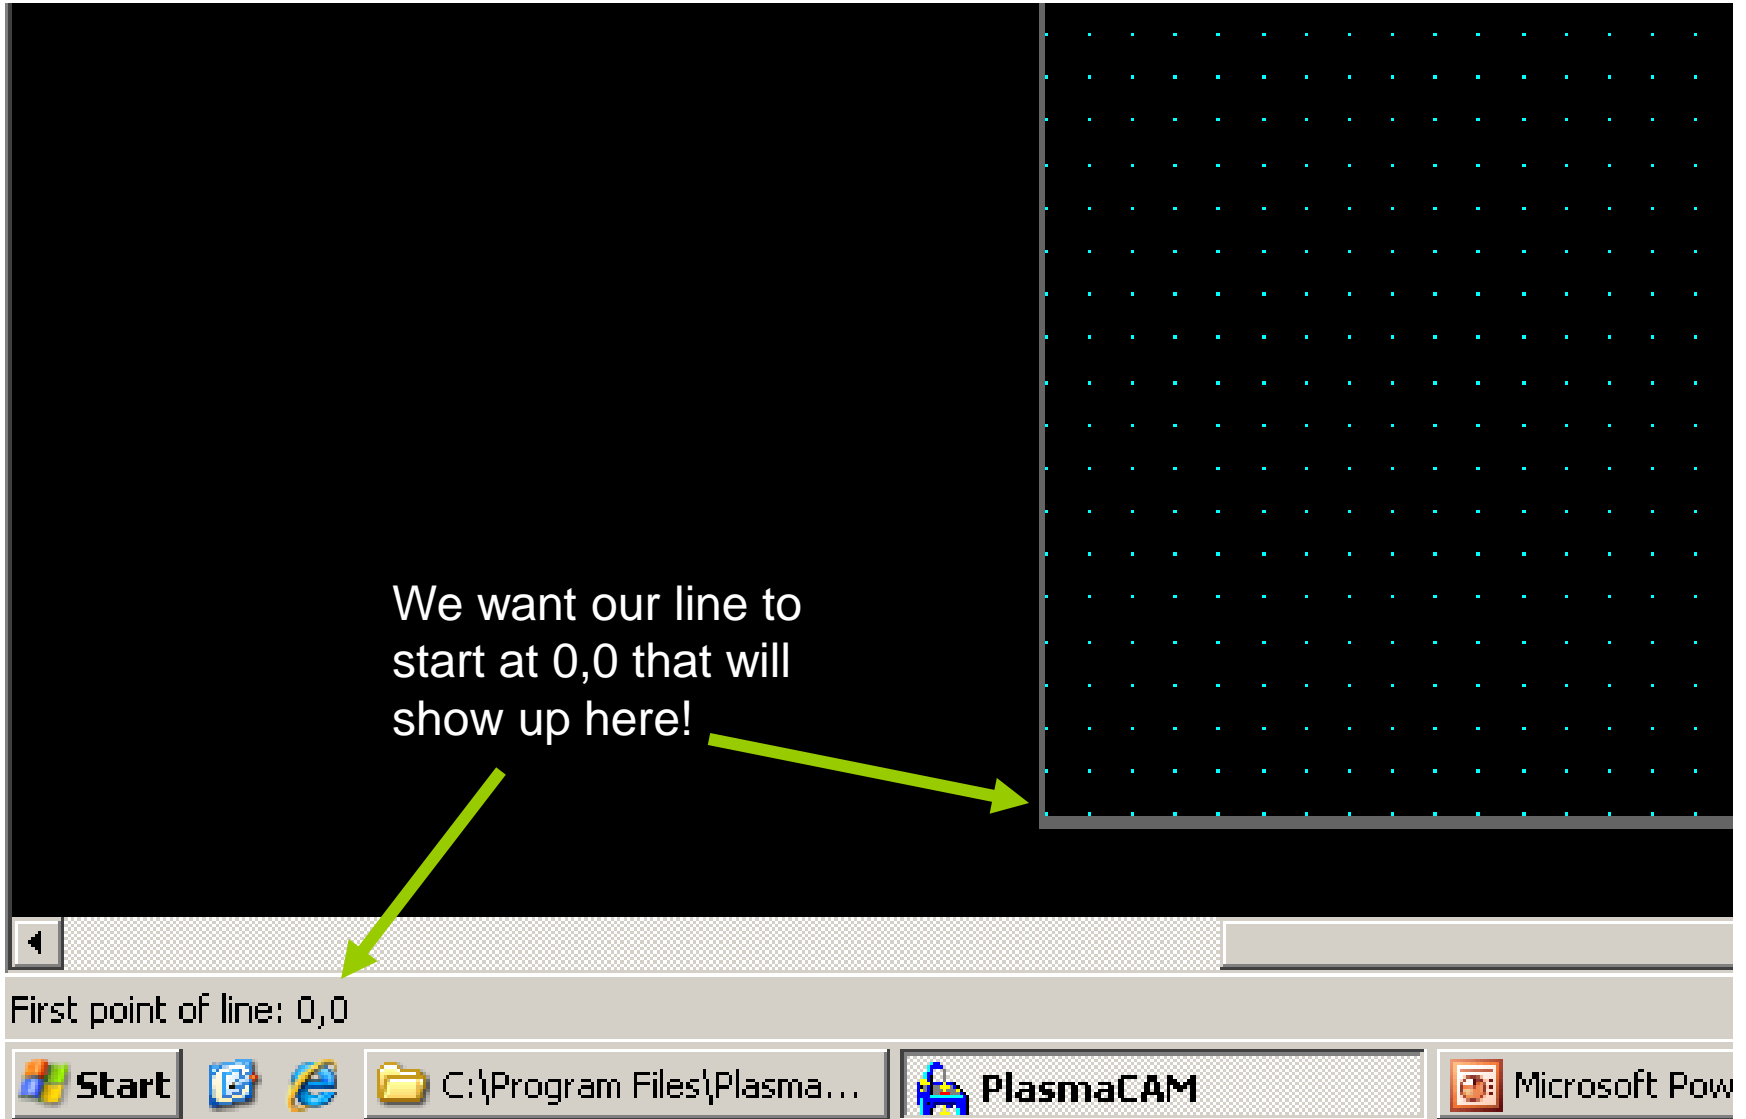

**Start**

C:\Program Files\Pla:

We want our line to start at 0,0 that will show up here!

First point of line: 0,0

C:\Program Files\Plasma...

PlasmaCAM

Microsoft Pow

The program will then ask us where the next point of our line should be.

A line will appear anchored at our base of 0,0

Next point of line:

C:\Program Files\Plasma...

PlasmaCAM

Microsoft PowerPoint -

Next point of  
our line!

Next point of line: 10,0

C:\Program Files\Plasma...

Plasma

Draw this line on you  
note page.

10" Line drawn at 0,0 to 10,0

1 paths are selected (2 nodes total)

C:\Program Files\Plasma...

PlasmaCAM

Microsoft PowerPoi

# To Draw a Square

Keyboard Shortcut:

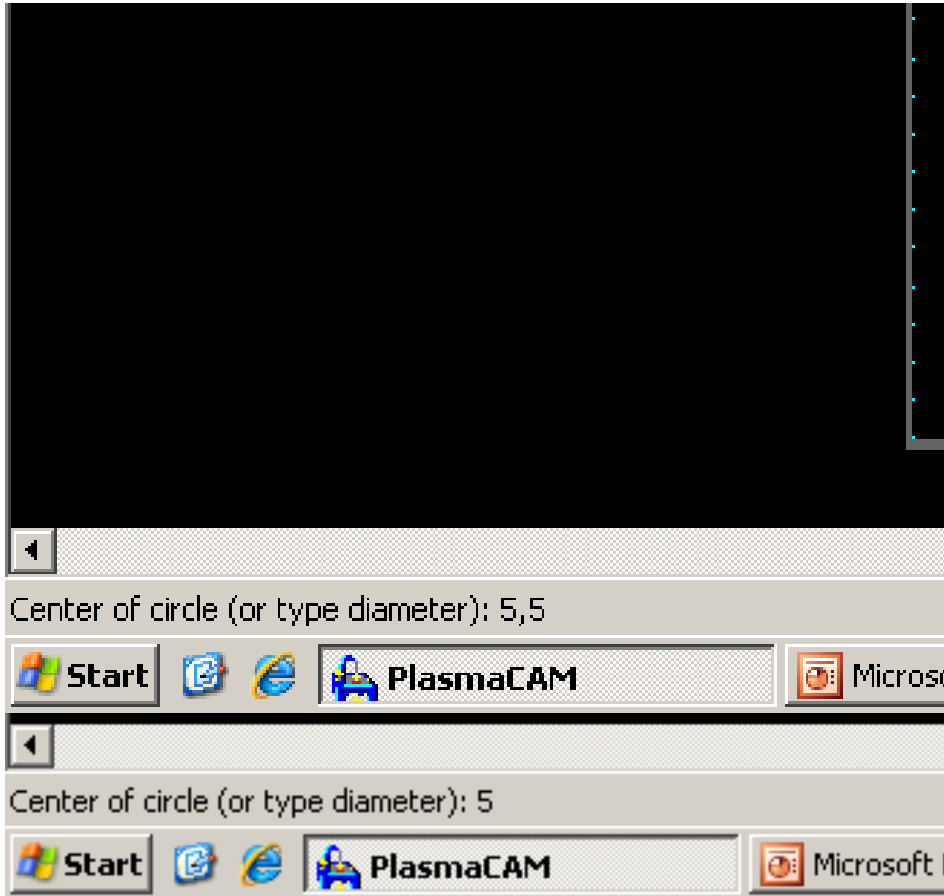

“G” (IDK G???)

First Corner 0,1

Second Corner 10,11

Draw this on your  
note page.

# To Draw a Circle

Keyboard Shortcut:

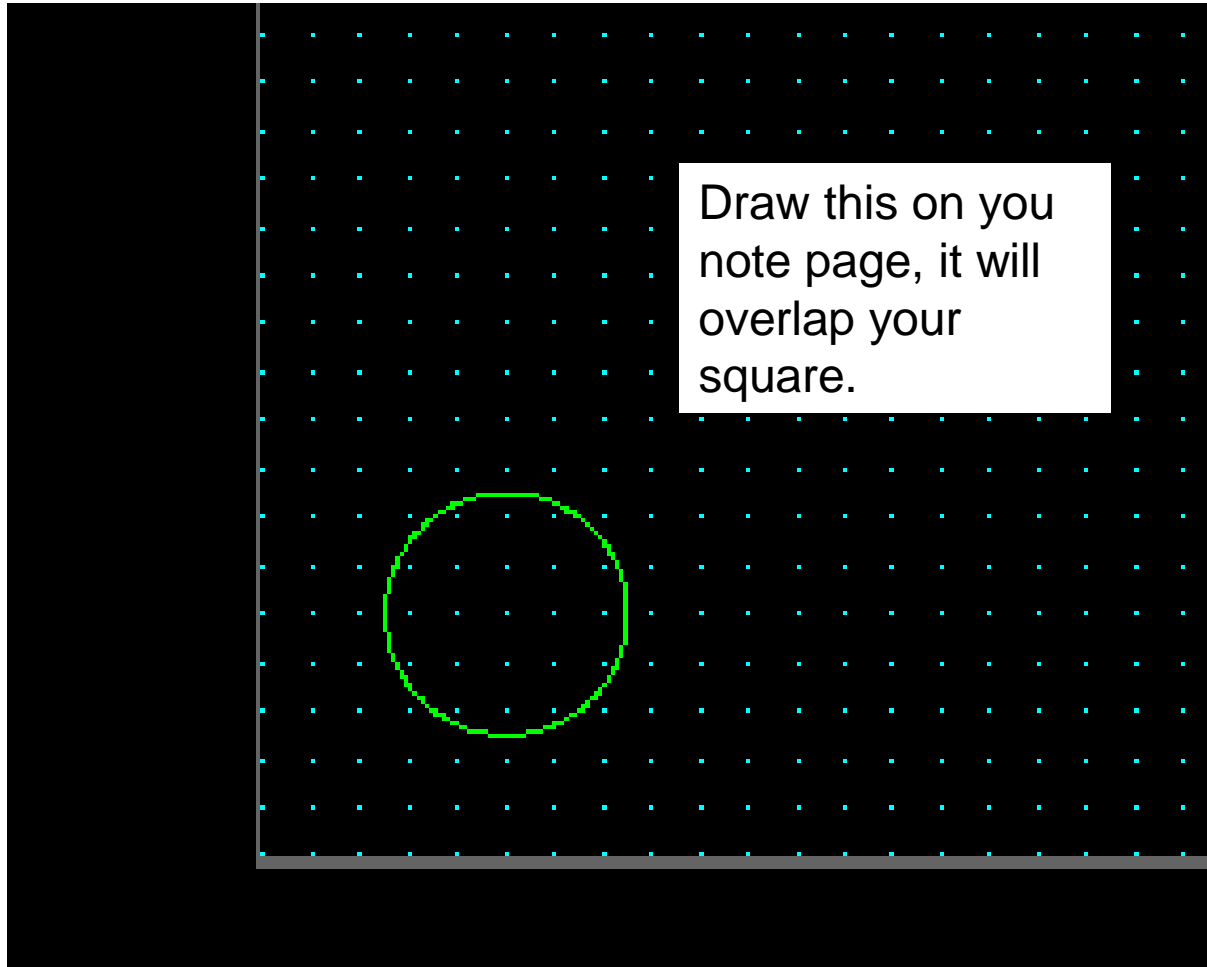

“Q”

Enter Center Point (X,Y)

Or simply type desired diameter and place freehand.

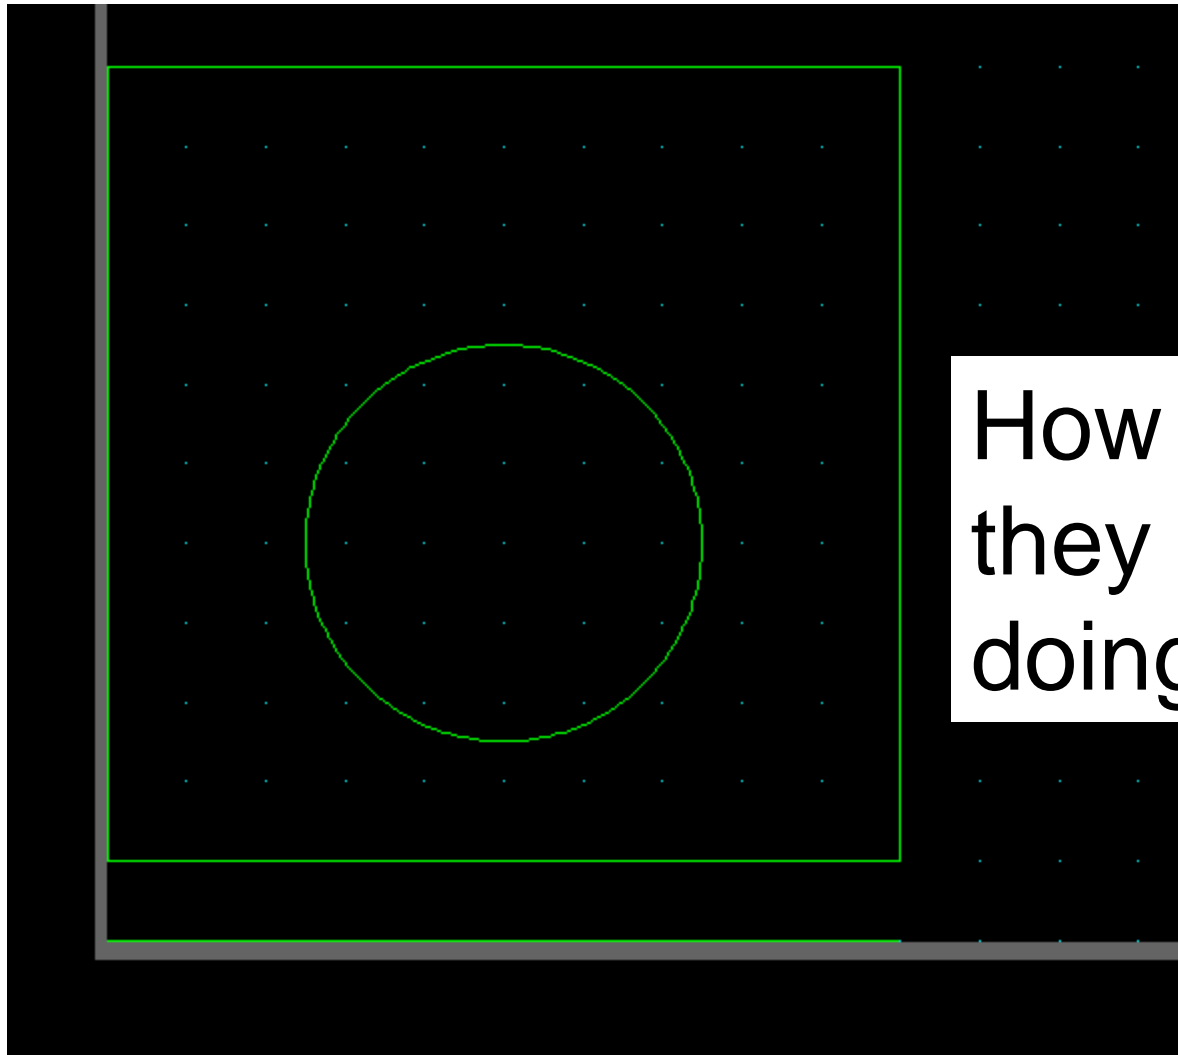

# 5" Diameter Circle at 5,5

Draw this on you  
note page, it will  
overlap your  
square.

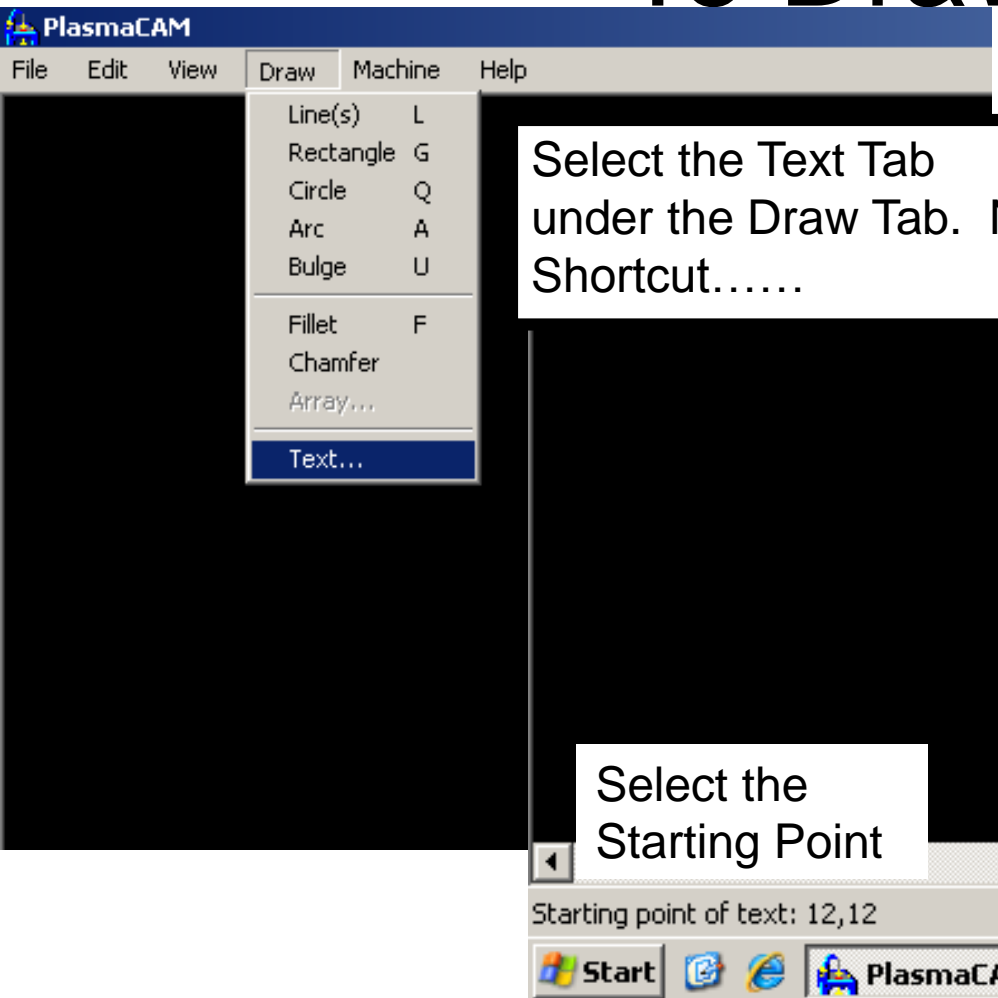

This is what the lower left of your notes should look like, compare yours to your neighbor.....

How are they doing???

# To Draw Text

Select the Starting Point

Starting point of text: 12,12

Top point of text (or type height): 12

Type Text here.

See Preview Here.

Choose Font Type Here.

PLASMA

What's wrong with this picture?

That's right, too big, we'll talk  
about scaling later.....

Text presents another problem, it has to be stenciled so that the parts of the letter that make it legible remain after the machine has cut it out.

Letters like P, A, B, R, O all need some attention before we can cut them out.

Text presents another problem, it has to be stenciled so that the parts of the letter that make it legible remain after the machine has cut it out.

The Red Outline represents the cut path of the plasma torch

Text presents another problem, it has to be stenciled so that the parts of the letter that make it legible remain after the machine has cut it out.

The Red Outline represents the cut path of the plasma torch, this is what remains if we don't "Stencil" the letter.

Note the center of the P is missing.....

# How to Stencil a letter

Draw a line that will cross the P like shown here.

# How to Stencil a letter

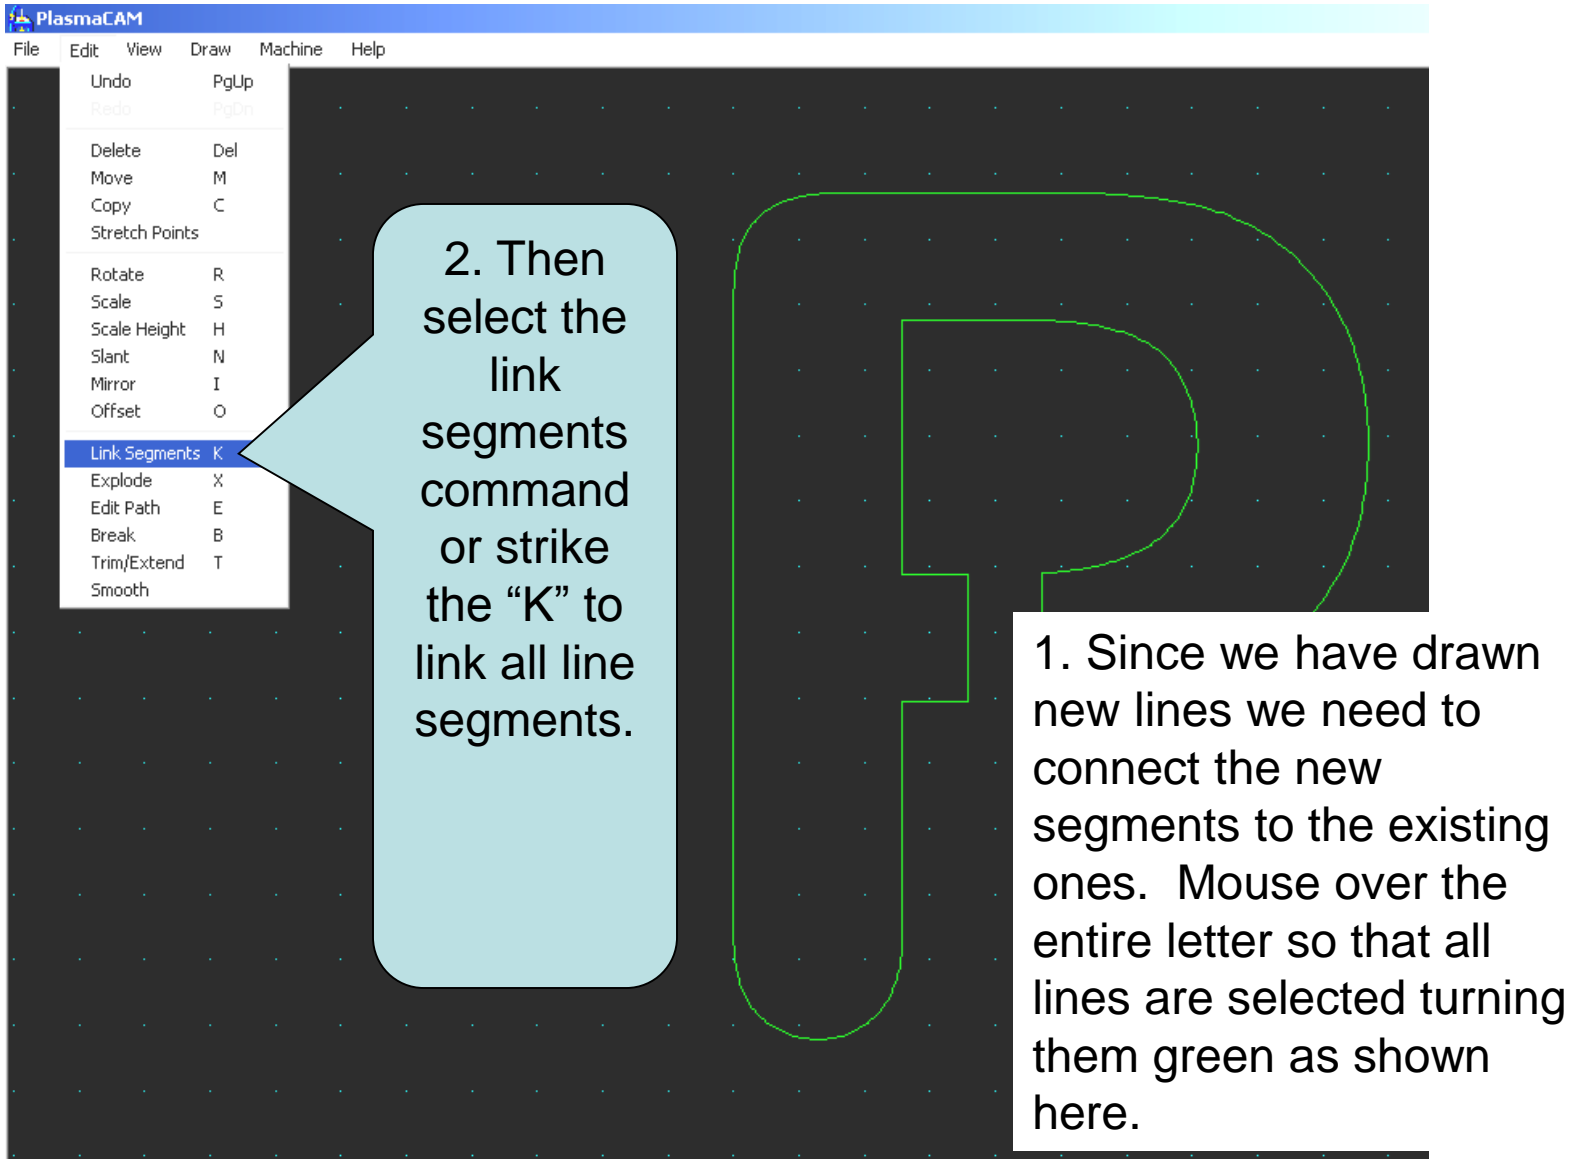

Draw a second line parallel to the first that will cross the P like shown here.

# How to Stencil a letter

Using the Trim/Extend (T) command found under the Edit Tab, trim the two lines creating a bridge so that the Center of the P does not fall out when the perimeter is cut.

# How to Stencil a letter

2. Then select the link segments command or strike the "K" to link all line segments.

1. Since we have drawn new lines we need to connect the new segments to the existing ones. Mouse over the entire letter so that all lines are selected turning them green as shown here.

# Stenciled P

The center of the P will remain as a piece of the steel left on the table after the cut. The Area in Dark Grey will fall.

# Now You Do it!

- Draw a 2" Square at 20,15
- Draw a 2" Circle at 20,10
- Draw a 2" Circle at 10, 20
- Draw your initials at 0,0 with 4" Letters
